2003 Mathematics

Higher

Finalised Marking Instructions
NB In and after the 2004 diet of examinations, the total number of marks for the Higher Mathematics examination will increase from 110 to 130. There will be NO other changes to the format of the examination.

To provide guidance to Centres on how the 20 additional marks will be allocated, additional pages have been added to the following 2003 Marking Instructions to show how an additional 20 marks could have been allocated to the 2003 examination.

Notes to the marking scheme for Higher Mathematics 2003

1. Illustrations where additional marks could be added to bring the overall total up to 130 are shown as follows:

   Paper 1 extra marks are shown on pages 21-22 of the paper 1 m/s.
   Paper 2 extra marks are shown on pages 21-22 of the paper 2 m/s.

2. Legend for the coding at the beginning of each marking scheme:

<table>
<thead>
<tr>
<th>1</th>
<th>2.1.1, 2.1.3</th>
<th>CN</th>
<th>C</th>
<th>03/101</th>
</tr>
</thead>
<tbody>
<tr>
<td>question</td>
<td>syllabus code(s)</td>
<td>calculator neutral</td>
<td>level</td>
<td>catalogue no.</td>
</tr>
<tr>
<td>NC</td>
<td>non-calculator</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C</td>
<td>calculator required</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
1. Marks must be assigned in accordance with these marking instructions. In principle, marks are awarded for what is correct, rather than marks deducted for what is wrong.

2. Award one mark for each ‘bullet’ point. Each error should be underlined in RED at the point in the working where it first occurs, and not at any subsequent stage of the working.

3. The working subsequent to an error must be followed through by the marker with possible full marks for the subsequent working, provided that the difficulty involved is approximately similar. Where, subsequent to an error, the working is eased, a deduction(s) of mark(s) should be made. This may happen where a question is divided into parts. In fact, failure to even answer an earlier section does not preclude a candidate from assuming the result of that section and obtaining full marks for a later section.

4. Correct working should be ticked (✔). This is essential for later stages of the SQA procedures. Where working subsequent to an error(s) is correct and scores marks, it should be marked with a crossed tick (✗). In appropriate cases attention may be directed to work which is not quite correct (e.g. bad form) but which has not been penalised, by underlining with a dotted or wavy line. Work which is correct but inadequate to score any marks should be corrected with a double cross tick (✗✗).

5. • The total mark for each section of a question should be entered in red in the outer right hand margin, opposite the end of the working concerned. 
• Only the mark should be written, not a fraction of the possible marks. 
• These marks should correspond to those on the question paper and these instructions.

6. It is of great importance that the utmost care should be exercised in adding up the marks. Where appropriate, all summations for totals and grand totals must be carefully checked. Where a candidate has scored zero marks for any question attempted, “0” should be shown against the answer.

7. As indicated on the front of the question paper, full credit should only be given where the solution contains appropriate working. Accept answers arrived at by inspection or mentally where it is possible for the answer so to have been obtained. Situations where you may accept such working will be indicated in the marking instructions.

cont/
8. Do not penalise:
   • working subsequent to a correct answer
   • omission of units
   • bad form
   • legitimate variations in numerical answers
   • correct working in the "wrong" part of a question

9. No piece of work should be scored through - even where a fundamental
    misunderstanding is apparent early in the answer. Reference should always be
    made to the marking scheme - answers which are widely off-beam are unlikely to
    include anything of relevance but in the vast majority of cases candidates still have
    the opportunity of gaining the odd mark or two provided it satisfies the criteria for
    the mark(s).

10. If in doubt between two marks, give an intermediate mark, but without fractions.
    When in doubt between consecutive numbers, give the higher mark.

11. In cases of difficulty covered neither in detail nor in principle in the Instructions,
    attention may be directed to the assessment of particular answers by making a
    referral to the P.A. Please see the general instructions for P.A. referrals.

12. No marks should be deducted at this stage for careless or badly arranged work. In
    cases where the writing or arrangement is very bad, a note may be made on the
    upper left-hand corner of the front cover of the script.

13 **Do not write any comments on the scripts.** A summary of acceptable notation is
    given on page 4.

---

**Summary**

Throughout the examination procedures many scripts are remarked. It is essential that
markers follow common procedures:

1. **Tick** correct working.
2. **Put a mark in the right-hand margin to match the marks allocations on the**
   **question paper.**
3. **Do not** write marks as fractions.
4. **Put each mark at the end** of the candidate's response to the question.
5. **Follow through** errors to see if candidates can score marks subsequent to the error.
6. **Do not** write any comments on the scripts.
Higher Mathematics: A Guide to Standard Signs and Abbreviations

Remember - No comments on the scripts. Please use the following and nothing else.

<table>
<thead>
<tr>
<th>Signs</th>
<th>Marks being allotted e.g. (●) would not normally be shown on scripts</th>
</tr>
</thead>
<tbody>
<tr>
<td>✓ The tick. You are not expected to tick every line but of course you must check through the whole of a response.</td>
<td>2</td>
</tr>
<tr>
<td>× The cross and underline. Underline an error and place a cross at the end of the line.</td>
<td></td>
</tr>
<tr>
<td>× The tick-cross. Use this to show correct work where you are following through subsequent to an error.</td>
<td></td>
</tr>
<tr>
<td>¥ The double cross-tick. Use this to show correct work but which is inadequate to score any marks.</td>
<td></td>
</tr>
<tr>
<td>▲ The roof. Use this to show something is missing such as a crucial step in a proof or a 'condition' etc.</td>
<td>3</td>
</tr>
<tr>
<td>The tilde. Use this to indicate a minor transgression which is not being penalised (such as bad form).</td>
<td>1</td>
</tr>
<tr>
<td>Eased. Where working is found correct whilst following through subsequent to an error, the working has been eased sufficiently for a mark not to be awarded.</td>
<td></td>
</tr>
<tr>
<td>BOD Benefit of Doubt. Use this where you have to decide between two consecutive marks and award the higher.</td>
<td></td>
</tr>
</tbody>
</table>

All of these are to help us be more consistent and accurate.

It goes without saying that however accurate you are in marking, it is no avail unless you have added the marks up correctly. Please double check totals!!
Give 1 mark for each *  
Illustrations for awarding each *

1 Find the equation of the line which passes through the point \((-1, 3)\) and is perpendicular to the line with equation \(4x + y - 1 = 0\).  

<table>
<thead>
<tr>
<th>1.1.9, 1.1.7</th>
<th>CN C</th>
<th>03/1</th>
<th>3 marks</th>
</tr>
</thead>
<tbody>
<tr>
<td>ans: (x - 4y + 13 = 0)</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- \(1\) ic: interpret gradient from linear equ.  
- \(2\) ic: find perp. gradient  
- \(3\) ic: state equation of line  

- \(4\) stated or implied by \(1\)  
- \(5\) \(m_{\text{perp}} = \frac{1}{4}\)  
- \(6\) \(y - 3 = \frac{1}{4}(x - (-1))\)

Notes  
1. \(1\) is only available following an attempt to find the perpendicular gradient.  
2. Wrong answer with no working gains no marks.

Example 1

\[
m = 4 \\
\begin{align*}
m_{\text{perp}} &= -\frac{1}{4} \\
y - 3 &= -\frac{1}{4}(x - (-1))
\end{align*}
\]

2 marks given

Example 6

\[
y = -4x + 1 \\
ax &= -4 \\
m &= -4
\]

is acceptable for \(1\)

Example 7

\[
y - 3 = \frac{1}{4}(x - (-1)) \\
x - 4y = -13
\]

may be awarded 2 marks,  
\(1\) mark being lost through lack of communication

Example 8

\[
m = -4 \\
m = \frac{1}{4} \\
y = \frac{1}{4}x + c \\
3 = \frac{1}{4}(-1) + c \\
c = 3 + \frac{1}{4}
\]

3 marks given

Example 9

\[
m = \frac{1}{4}
\]

and nothing else  
0 marks given

Example 10

\[
m = -\frac{1}{4} \\
y - 3 = -\frac{1}{4}(x - (-1))
\]

</tbody>
</table>

- \(^*1\) ic : start to complete square
- \(^*2\) pd : finish completing the square
- \(^*3\) ic : sketch
- \(^*4\) ic : sketch

- \(^*1\) \((x + 3)^2\)
- \(^*2\) +2

- \(^*3\) any two from
  - \( U \) – parabola
  - minimum at \((-3, 2)\)
  - intercept on \( y \) – axis at \((0, 11)\)
- \(^*4\) all three of the above facts

Notes
1. 2 marks may be awarded for stating \( a = 3 \) and \( b = 2 \)
2. Accept the information about \((-3, 2)\) and \((0, 11)\) in the body of the working provided the sketch shows a parabola in a consistent position.

\[
\begin{align*}
(x + 3)^2 + 2 & \quad \left(\begin{array}{l}
\checkmark \\
\checkmark
\end{array}\right) \\
(x - 3)^2 + 2 & \quad \left(\begin{array}{l}
\times \\
\checkmark
\end{array}\right) \\
\text{For a U parabola through (0, 11) and (3, 2)} & \quad \left(\begin{array}{l}
\checkmark \\
\times
\end{array}\right) \\
\text{3 mark given} & \quad \left(\begin{array}{l}
\checkmark \\
\times
\end{array}\right) \\
\text{For a U parabola through (0, 11) and the minimum marked as (-3, 20) } & \quad \left(\begin{array}{l}
\checkmark \\
\times
\end{array}\right) \\
\text{2 marks given}
\end{align*}
\]
3 Vectors $\mathbf{u}$ and $\mathbf{v}$ are defined by $\mathbf{u} = 3\mathbf{i} + 2\mathbf{j}$ and $\mathbf{v} = 2\mathbf{i} - 3\mathbf{j} + 4\mathbf{k}$.
Determine whether or not $\mathbf{u}$ and $\mathbf{v}$ are perpendicular to each other.

3 3.1.1/9/.10 CN C 03/53
ans: vectors are perpendicular

2 marks

$*^1$ as: use scalar product and get zero
$*^2$ pd: process

$*^1$ for perpendicularity $\mathbf{u} \cdot \mathbf{v} = 0$

$*^2$ \[
\begin{pmatrix} 3 \\ 2 \\ 2 \\ 0 \\ -3 \\ 4 \end{pmatrix} \cdot \begin{pmatrix} 2 \\ -6 \end{pmatrix} = 6 - 6 + 0 = 0
\]

Example 1

\[
\begin{pmatrix} 3 \\ 2 \\ 3 \\ 0 \\ 4 \end{pmatrix}
\]

$*^1$ X

$*^2$ $6 + 6 + 0 = 12$
so $\mathbf{u}$ and $\mathbf{v}$ not perp.
$*^2$ f.t.

1 mark given

Example 2

$\cos(\theta) = a_1a_1 + a_2a_2 + a_3a_3$

$= 6 - 6 + 0$

$= 0$

$\theta = 90$

$*^2$ f.t.

1 mark given

Example 3

$\cos(\theta) = \frac{6 - 6 + 0}{|\mathbf{u}| |\mathbf{v}|}$

$= 0$

$\theta = 90$

$*^1$ f.t.

2 marks given

Example 4

$(3\mathbf{i} + 2\mathbf{j})(2\mathbf{i} - 3\mathbf{j} + 4\mathbf{k})$

$= 6\mathbf{i} - 9\mathbf{i} + 12\mathbf{k} + 4\mathbf{j} - 6\mathbf{j} - 8\mathbf{j} + 8\mathbf{k}$

$= 6 - 6$

$= 0$

so $\mathbf{u}, \mathbf{v}$ perpendicular

$*^1$ f.t.

2 marks given
<table>
<thead>
<tr>
<th>Give 1 mark for each *</th>

</thead>
<tbody>
<tr>
<td>4 A recurrence relation is defined by ( u_{n+1} = pu_n + q ), where (-1 &lt; p &lt; 1) and ( u_0 = 12 ).</td>
<td>2</td>
</tr>
<tr>
<td>(a) If ( u_1 = 15 ) and ( u_2 = 16 ), find the values of ( p ) and ( q ).</td>
<td>2</td>
</tr>
<tr>
<td>(b) Find the limit of this recurrence relation as ( n \to \infty ).</td>
<td>2</td>
</tr>
</tbody>
</table>

**Example 1**

\[
\begin{align*}
12 &= 16p + q \\
15 &= 15p + q
\end{align*}
\]

*1 \( p = \frac{1}{2}, q = 11 \)

(b) \( 16\frac{1}{2} \)

*1 \( \text{ss: e.g. form two equations in } p \text{ and } q \)

*2 \( \text{pd: process limit} \)

*3 \( \text{ss: algebraic strategy for limit} \)

*4 \( \text{pd: process limit} \)

Notes

1 for *1

either two equations explicitly stated

or a trial and improvement approach checking in

particular that \( u_4 \) does in fact equal 15 and \( u_2 \) does

in fact equal 16

2 for (a) correct answers with no working may only

earn *2 (one mark being lost through lack of com-

munication)

3 for (a) trial and improvement leading to answers

other than the correct ones earn no marks

4 for any rounding \( p = 0.3 \) or 0.33 instead of \( p = \frac{1}{2} \)

in (a) or (b) the candidate loses *2 or *4

BUT candidates may not lose both *2 and *4

6 other acceptable strategies for the limit at *3 are

- \( L = \frac{1}{1-p} \)

- "lost part" = "add on" i.e. \( \frac{1}{2} L = 11 \)

7 if \( p \) has been incorrectly valued \( \geq 1 \) or \( \leq -1 \), *3 may

still be awarded for a statement that the limit does

not exist but *4 is not available.

8 candidates who choose values for \( p \) and \( q \) ex nihilo

may still earn *3 and *4

9 *4 is lost if answers are left like \( \frac{11}{3} \) but uncancelled

fractions e.g. \( \frac{66}{4} \), are acceptable
<table>
<thead>
<tr>
<th>5</th>
<th>Given that ( f(x) = \sqrt{x} + \frac{2}{x^2} ), find ( f'(4) ).</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.3.2, 1.3.4</td>
<td>CN C 03/19</td>
</tr>
<tr>
<td>ans : ( \frac{1}{8} )</td>
<td>5 marks</td>
</tr>
<tr>
<td>( \star^1 ) pd : express in standard form</td>
<td>( \star^1 ) stated or implied by ( \star^3 )</td>
</tr>
<tr>
<td>( \star^2 ) pd : express in standard form</td>
<td>( \star^2 ) ( 2x^{-2} ) stated or implied by ( \star^4 )</td>
</tr>
<tr>
<td>( \star^3 ) pd : differentiate fractional index</td>
<td>( \star^3 ) ( \frac{1}{2}x^{-\frac{1}{2}} )</td>
</tr>
<tr>
<td>( \star^4 ) pd : differentiate negative index</td>
<td>( \star^4 ) ( -4x^{-3} )</td>
</tr>
<tr>
<td>( \star^5 ) pd : evaluation</td>
<td>( \star^5 ) ( \frac{1}{8} )</td>
</tr>
</tbody>
</table>

Notes
1. If incorrectly expressed in standard form, follow throughs must match the mark descriptors.
2. \( \star^5 \) can only be awarded on a follow through provided the evaluation involves a fractional index and a negative index.
3. For \( \star^5 \) accept \( \frac{12}{64} \).
4. No marks can be gained for finding \( f(4) \).

Example 1
\[
\begin{align*}
f(x) &= x^\frac{1}{2} + 2x^{-\frac{1}{2}} & \quad \star^1 \checkmark \\
f'(x) &= \frac{1}{2}x^{-\frac{1}{2}} - x^{-\frac{3}{2}} & \quad \star^2 \times \text{f.t.} \\
f'(4) &= \frac{1}{2} - \frac{1}{8} = \frac{3}{8} & \quad \star^3 \times \text{f.t.} \quad \star^4 \checkmark \text{f.t.} \\
4 \text{ marks given}
\end{align*}
\]

Example 2
\[
\begin{align*}
f(x) &= x^3 + 2x^{-2} & \quad \star^1 \times \\
f'(x) &= 3x^2 - 4x^{-3} & \quad \star^2 \checkmark \\
f'(x) &= -x^{-3} - 4x^{-3} & \quad \star^3 \times \text{no fractional index} \\
f'(4) &= -\frac{1}{64} - \frac{1}{64} = -\frac{1}{32} & \quad \star^4 \checkmark \text{f.t. eased} \quad \star^5 \times \text{f.t. eased} \\
2 \text{ marks given}
\end{align*}
\]
6 A and B are the points \((-1, -3, 2)\) and \((2, -1, 1)\) respectively. 
B and C are the points of trisection of AD, that is \(AB = BC = CD\).
Find the coordinates of D.

\[
\begin{align*}
\vec{AB} & = \begin{pmatrix} 3 \\ 2 \\ -1 \end{pmatrix} \\
\vec{AD} = 3\vec{AB} & = \begin{pmatrix} 9 \\ 6 \\ -3 \end{pmatrix}
\end{align*}
\]

3 marks

**Alternative 1**

\[
\begin{align*}
\vec{AB} & = \begin{pmatrix} 3 \\ 2 \\ -1 \end{pmatrix} \\
C & = (5, 1, 0) \\
D & = (8, 3, -1)
\end{align*}
\]

**Notes**
1. Treat as bad form expressions such as 
   \[
   D = \begin{pmatrix} 8 \\ 3 \\ -1 \end{pmatrix} \quad \text{or} \quad \vec{BD} = (6, 4, -2)
   \]
2. D= \((8, 3, -1)\) with no working may be awarded 2 marks, 1 mark being lost for poor communication.
3. A wrong answer with no working earns no marks.
4. If A is taken as \((2, -1, 1)\) and B as \((-1, -3, 2)\) then work leading to \(D(-7, -7, 4)\) may be awarded 2 marks.

**Example 1**

\[
\begin{align*}
C & = (5, 1, 0) \\
D & = (8, 3, -1)
\end{align*}
\]

\[
\begin{align*}
\checkmark & \quad \checkmark \\
\checkmark & \quad \checkmark
\end{align*}
\]

3 marks given
7. Show that the line with equation \( y = 2x + 1 \) does not intersect the parabola with equation \( y = x^2 + 3x + 4 \).

\[ x^2 + 3x + 4 = 2x + 1 \]
\[ x^2 + x + 3 = 0 \]
\[ b^2 - 4ac = 1 \]
\[ x^2 + 3x = 7 \]
\[ x^2 + 3x + 4 = 2x + 1 \]

Notes:
1. Use of the "alternative" discriminant \( b^2 + 4ac \): lose \( *3 \) and follow through. All other versions lose \( *3, *4 \) and \( *5 \).

Example 1
\[ x^2 + 3x + 4 = 0 \]
\[ b^2 - 4ac = 9 - 16 \]
no marks awarded

Example 2
\[ x^2 + 3x + 4 \neq 2x + 1 \]
lose \( *2 \) for using the "not equals" sign. Treat the rest as bad form

Example 3
\[ y = (2x + 1)^2 + 3(2x + 1) + 4 = 0 \]
\[ 4x^2 + 10x + 8 = 0 \]
\[ b^2 - 4ac = 100 - 128 = -28 \]
so no intersection

Example 4
\[ x^2 + 3x + 4 = 2x + 1 \]
\[ x^2 + x + 3 = 0 \]
\[ b^2 - 4ac < 0 \]
so no intersection

Example 5
\[ x^2 + 3x + 4 = 2x + 1 \]
\[ x^2 + x + 3 = 0 \]
\[ b^2 - 4ac < 0 \]
so no real roots

3 marks given
2 marks given
### Question 8

Find \[
\int \frac{dx}{3(3x+1)^{\frac{3}{2}}}.
\]

**Illustrations for awarding each mark:**

- **1** Mark: Express in standard form.
- **2** Mark: Integrate.
- **3** Mark: Integrate again.
- **4** Mark: Evaluate using limits.

**Answer:** \[\frac{1}{3} \cdot \frac{2}{3} \cdot \frac{3}{2} \cdot \frac{1}{4} = \frac{1}{16} \]

#### Example 1

\[
\left[ \frac{1}{3(3x+1)^{\frac{3}{2}}} \right]_{0}^{x} = \frac{1}{3} \times \frac{2}{3} \times \frac{3}{2} \cdot \frac{1}{4} - \frac{1}{3} \times \frac{2}{3} \times \frac{3}{2} \cdot \frac{1}{4}
\]

**Notes:**
- Treat \[\frac{2}{3} \cdot x + c\] as bad form.
- \[\frac{1}{1.5}\] does not gain **4** marks.
- **4** is only available after an attempt has been made to integrate.
- **4** is only available if the evaluation involves a fractional power.

#### Example 2

\[
\left[ \frac{1}{3(3x+1)^{\frac{3}{2}}} \right]_{0}^{\frac{1}{2}} = \frac{1}{3} \times \frac{2}{3} \times \frac{3}{2} \cdot \frac{1}{4} - \frac{1}{3} \times \frac{2}{3} \times \frac{3}{2} \cdot \frac{1}{4}
\]

**1 Mark Given**

#### Example 3

\[
\left[ -\frac{1}{2(3x+1)^{\frac{3}{2}}} \right]_{0}^{\sqrt{2}} = \frac{1}{3} \times \frac{2}{3} \times \frac{3}{2} \cdot \frac{1}{4} - \frac{1}{3} \times \frac{2}{3} \times \frac{3}{2} \cdot \frac{1}{4}
\]

**1 Mark Given**

#### Example 4

\[
\left[ 2(3x+1)^{\frac{3}{2}} \right]_{0}^{\sqrt{2}} = 2 \times \frac{1}{3} \times \frac{2}{3} \times \frac{3}{2} \cdot \frac{1}{4} - 2 \times \frac{1}{3} \times \frac{2}{3} \times \frac{3}{2} \cdot \frac{1}{4}
\]

**3 Marks Given**

#### Example 5

\[
\left[ \frac{(6x+2)^{\frac{3}{2}}}{\sqrt{2}} \right]_{0}^{\sqrt{2}} = \frac{1}{3} \times \frac{2}{3} \times \frac{3}{2} \cdot \frac{1}{4} - \frac{1}{3} \times \frac{2}{3} \times \frac{3}{2} \cdot \frac{1}{4}
\]

**2 Marks Given**
Functions \( f(x) = \frac{1}{x-4} \) and \( g(x) = 2x+3 \) are defined on suitable domains.

(a) Find an expression for \( h(x) \) where \( h(x) = f(g(x)) \).

(b) Write down any restriction on the domain of \( h \).

\[ \begin{align*}
\text{Give 1 mark for each } \ast & \quad \text{Illustrations for awarding each } \ast \\
9 & \quad \text{(a) ans : } \frac{1}{2x-1} \quad \text{2 marks} \\
& \quad \text{(b) ans : } x \neq \frac{1}{2} \quad \text{1 mark} \\
& \quad \ast \quad \text{ic : start composite function} \\
& \quad \ast \quad \text{ic : complete composite function} \\
& \quad \ast \quad \text{ic : interpret denominator} \\
& \quad \ast^1 \quad f(2x+3) \quad \text{stated or implied by } \ast \!
\end{align*} \]

\[ \begin{align*}
& \quad \ast^2 \quad \frac{1}{2x+3-4} \\
& \quad \ast^3 \quad x \neq \frac{1}{2} \\
\end{align*} \]

Example 1

\[ \begin{array}{c}
\frac{1}{x-4} \\
\frac{2}{x-4} + 3 \\
x \neq 4
\end{array} \]

\[ \begin{align*}
\ast & \quad \times \\
\ast^1 & \quad \times \\
\ast^2 & \quad \times \text{ f.t.} \\
\ast^3 & \quad \times \text{ f.t.} \\
\ast & \quad \text{2 marks given}
\end{align*} \]

Notes

1. Use example 1 if candidate finds \( g(f(x)) \) [which they may call \( f(g(x)) \)]!!!

2. \( \ast^3 \) is only available for working containing an algebraic fraction e.g. \( \frac{a}{x+c} \) or harder.

3. for \( \ast^3 \) accept any statement involving a \( \frac{1}{2} \) e.g.
   a. \( x \neq \frac{1}{2} \) (the actual restriction)
   b. \( x = \frac{1}{2} \) (the value to be restricted from the domain)
   c. \( x > \frac{1}{2} \) (part of the restricted domain)
   d. \( x < \frac{1}{2} \) (also part of the restricted domain)

   In each case the candidate has identified the value of \( x \) which makes the denominator zero (which was the point of (b)).

4. for (b) do not accept unsimplified forms such as \( 2x-1 = 0 \).

4. for \( \ast^3 \), treat \( h \neq \frac{1}{2} \) as bad form.
| 10 | A is the point $(8, 4)$. The line $OA$ is inclined at an angle $p$ radians to the $x$-axis. |  
(a) Find the exact values of  
(i) $\sin(2p)$  
(ii) $\cos(2p)$.  
The line $OB$ is inclined at an angle $2p$ radians to the $x$-axis.  
(b) Write down the exact value of the gradient of $OB$. | ![Diagram](image.png) |

(a) ans : $\frac{4}{5}$, $\frac{1}{5}$ | 5 marks |
|  
(b) ans : $\frac{1}{5}$ | 1 mark |
| *1 pd : calculate hypotenuse  
*2 pd : calculate $\sin p$ and $\cos p$  
*3 ss : use double angle formula  
*4 pd : process $\sin 2p$  
*5 pd : process $\cos 2p$  
*6 pd : relate gradient and tan |  
*1 hypot = $\sqrt{80}$  
*2 $\sin(p) = \frac{4}{5}$ and $\cos(p) = \frac{1}{5}$  
*3 $\sin(2p) = 2\sin(p)\cos(p)$  
*4 $\sin(2p) = \frac{1}{5}$  
*5 $\cos(2p) = \frac{1}{5}$  
*6 $\frac{1}{5}$ |
| Example 1 |  
\[
\tan(p) = \frac{1}{5} \\
p = 30^\circ \\
\sin(p) = \frac{1}{5}, \cos(p) = \frac{\sqrt{24}}{5} \\
\sin(2p) = 2\sin(p)\cos(p) \\
= 2 \times \frac{1}{5} \times \frac{\sqrt{24}}{5} \\
= \frac{\sqrt{24}}{5} \\
\cos(2p) = 2\cos^2(p) - 1 \\
= 2 \left( \frac{1}{5} \right)^2 - 1 \\
= \frac{1}{5} \\
\tan(2p) = \frac{\frac{\sqrt{24}}{5}}{} = \sqrt{3} \\
| 5 marks given |
| Notes |  
1 accept cancelled fractions for *4, *5 and *6.  
e.g. $\frac{64}{80}$, $\frac{48}{80}$ and $\frac{64}{48}$ are common  
2 marks 4-6 are not available to candidates who base their answers on the assumption that $p = 30^\circ$, 45 etc so that $\sin(2p) = \sin(60)$ etc. See examples 1 & 2. |
| Example 2 |  
\[
\tan(p) = \frac{1}{5} \\
p = 30^\circ \\
\sin(2p) = \sin 60 \\
= \frac{\sqrt{3}}{2} \\
\cos(2p) = \cos 60 \\
= \frac{1}{2} \\
\tan(2p) = \tan 60 = \sqrt{3} \\

### Question 11

Give 1 mark for each * Illustrations for awarding each *

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>11</td>
<td></td>
</tr>
<tr>
<td>O, A and B are the centres of the three circles shown in the diagram below.</td>
<td></td>
</tr>
<tr>
<td>The two outer circles are congruent and each touches the smallest circle.</td>
<td></td>
</tr>
<tr>
<td>Circle centre A has equation $(x - 12)^2 + (y + 5)^2 = 25$.</td>
<td></td>
</tr>
<tr>
<td>The three centres lie on a parabola whose axis of symmetry is shown by the broken line through A.</td>
<td></td>
</tr>
</tbody>
</table>

(a) (i) State the coordinates of A and find the length of the line OA.  
(ii) Hence find the equation of the circle with centre B.  

(b) The equation of the parabola can be written in the form $y = px(x + q)$. Find the values of $p$ and $q$.  

---

### Question 11

2.4.1, 2.1.10 CN CBA 03/40

| (a) ans : A(12, -5), OA = 13 |   |
| (b) ans : $p = \frac{3}{14}$, $q = -24$ |   |

2 marks

---

Notes

1. Take care with the implications at *3 and *4. Only the correct values for $r$ and $B$ can be implied by *5. Incorrect values of $r$ and/or $B$ must be stated before the equation of the circle is given in order that *5 can be awarded as a follow-through mark.
12 Simplify $3 \log_e(2e) - 2 \log_e(3e)$, expressing your answer in the form $A + \log_e(B) - \log_e(C)$ where $A$, $B$ and $C$ are whole numbers.

**Give 1 mark for each**

**Illustrations for awarding each**

Increase in marks for Paper 1 = 9
Increase in marks for Paper 2 = 11
Total increase in marks = 20.

For 2004 the marks will be allocated as follows:
Paper 1 60
Paper 2 70
Total 130
1. Marks must be assigned in accordance with these marking instructions. In principle, marks are awarded for what is correct, rather than marks deducted for what is wrong.

2. Award one mark for each ‘bullet’ point. Each error should be underlined in RED at the point in the working where it first occurs, and not at any subsequent stage of the working.

3. The working subsequent to an error must be followed through by the marker with possible full marks for the subsequent working, provided that the difficulty involved is approximately similar. Where, subsequent to an error, the working is eased, a deduction(s) of mark(s) should be made. This may happen where a question is divided into parts. In fact, failure to even answer an earlier section does not preclude a candidate from assuming the result of that section and obtaining full marks for a later section.

4. Correct working should be ticked (✓). This is essential for later stages of the SQA procedures. Where working subsequent to an error(s) is correct and scores marks, it should be marked with a crossed tick (✗). In appropriate cases attention may be directed to work which is not quite correct (e.g. bad form) but which has not been penalised, by underlining with a dotted or wavy line. Work which is correct but inadequate to score any marks should be corrected with a double cross tick (✗✗).

5. • The total mark for each section of a question should be entered in red in the outer right hand margin, opposite the end of the working concerned.
• Only the mark should be written, not a fraction of the possible marks.
• These marks should correspond to those on the question paper and these instructions.

6. It is of great importance that the utmost care should be exercised in adding up the marks. Where appropriate, all summations for totals and grand totals must be carefully checked.
Where a candidate has scored zero marks for any question attempted, “0” should be shown against the answer.

7. As indicated on the front of the question paper, full credit should only be given where the solution contains appropriate working. Accept answers arrived at by inspection or mentally where it is possible for the answer so to have been obtained. Situations where you may accept such working will be indicated in the marking instructions.

cont/
8. Do not penalise:
   - working subsequent to a correct answer
   - omission of units
   - bad form
   - legitimate variations in numerical answers
   - correct working in the “wrong” part of a question

9. No piece of work should be scored through - even where a fundamental misunderstanding is apparent early in the answer. Reference should always be made to the marking scheme - answers which are widely off-beam are unlikely to include anything of relevance but in the vast majority of cases candidates still have the opportunity of gaining the odd mark or two provided it satisfies the criteria for the mark(s).

10. If in doubt between two marks, give an intermediate mark, but without fractions. When in doubt between consecutive numbers, give the higher mark.

11. In cases of difficulty covered neither in detail nor in principle in the Instructions, attention may be directed to the assessment of particular answers by making a referral to the P.A. Please see the general instructions for P.A. referrals.

12. No marks should be deducted at this stage for careless or badly arranged work. In cases where the writing or arrangement is very bad, a note may be made on the upper left-hand corner of the front cover of the script.

13 **Do not write any comments on the scripts.** A summary of acceptable notation is given on page 4.

**Summary**

<table>
<thead>
<tr>
<th>Throughout the examination procedures many scripts are remarked. It is essential that markers follow common procedures:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. <strong>Tick</strong> correct working.</td>
</tr>
<tr>
<td>2. Put a mark in the <strong>right-hand margin to match the marks allocations on the question paper.</strong></td>
</tr>
<tr>
<td>3. <strong>Do not</strong> write marks as fractions.</td>
</tr>
<tr>
<td>4. Put each mark <strong>at the end</strong> of the candidate’s response to the question.</td>
</tr>
<tr>
<td>5. <strong>Follow through</strong> errors to see if candidates can score marks subsequent to the error.</td>
</tr>
<tr>
<td>6. <strong>Do not</strong> write any comments on the scripts.</td>
</tr>
</tbody>
</table>
Higher Mathematics: A Guide to Standard Signs and Abbreviations

Remember - No comments on the scripts. Please use the following and nothing else.

**Signs**

- **✓** The tick. You are not expected to tick every line but of course you must check through the whole of a response.

- **✗** The cross and underline. Underline an error and place a cross at the end of the line.

- **✗** The tick-cross. Use this to show correct work where you are following through subsequent to an error.

- **✗** The double cross-tick. Use this to show correct work but which is inadequate to score any marks.

- **✓** The roof. Use this to show something is missing such as a crucial step in a proof or a ‘condition’ etc.

**Marks being allotted e.g. (•) would not normally be shown on scripts**

\]

\[
\left[ (x^2 + 2x) - (x^3 - x^2 - 6x) \right]_0^1 
\]

\[
\frac{1}{2} x^2 + x^3 
\]

\[
\frac{1}{4} x^4 - \frac{1}{2} x^3 - 3x^2 
\]

\[
42 \frac{2}{3} 
\]

Notes

1. *1 is lost for subtracting the wrong way round.
2. *5 will also be lost for statements such as
   -42 \frac{2}{3} = 42 \frac{2}{3},
   -42 \frac{2}{3} so ignore the \(-ve,
   -42 \frac{2}{3} = 42 \frac{2}{3} \text{sq units}

3. *5 may still be gained for statements such as
   ... -42 \frac{2}{3} and so the area = 42 \frac{2}{3}.

4. For candidates who split the area into three integrals, see model in Alternative 2
5. Do not penalise decimal approximations
6. Differentiation loses *4 and *5
7. \( \int_0^4 (f(x) - g(x)) dx \) loses *2 and possibly *5
8. \( \int_0^4 (g(x) - f(x)) dx \) is technically correct and hence all 5 marks are available
9. Accept at *3, 8x + 2x^2 - x^3 appearing from solving "upper" = "lower"
10. using \( f(x) + g(x) \) leading to 32 gains *2, *4 and *5

\[
\text{Example 1}
\]

\[
\left[ (x^2 + 2x - x^3 - 6x) \right]_0^4
\]

\[
\frac{1}{2} x^4 - 2x^2 
\]

\[
-6 \quad \text{bad form} \quad *1 \quad \checkmark
\]

**2 \quad \checkmark

**3 \quad \times

**4 \quad \checkmark \text{ Eased}

**5 \quad \times

\text{- area} = 96

3 marks given

</table>
| 4 | (a) Find the equation of the tangent to the curve with equation \( y = x^3 + 2x^2 - 3x + 2 \) at the point where \( x = 1 \).  
(b) Show that this line is also a tangent to the circle with equation \( x^2 + y^2 - 12x - 10y + 44 = 0 \) and state the coordinates of the point of contact. |
| 5 |  |
| 6 |  |

### Alternative 1

- \( \frac{dy}{dx} = 3x^2 \)
- \( \frac{dy}{dx} = 3x^2 + 4x - 3 \)
- \( m = \frac{dy}{dx} = 4 \) gradient stated or implied by *1
- \( y_{int} = 2 \)
- \( y = 2 = 4(x - 1) \)
- \( y = 4x - 2 \)
- \( x^2 + (4x - 2)^2 - 12x - 10(4x - 2) + 44 = 0 \)
- \( 17x^2 - 66x + 68 = 0 \)
- \( 17(x - 2)(x - 2) = 0 \)
- *5* equal roots \( \Rightarrow \) tangent
- *11* pt of contact \( = (2, 6) \)

### Example 1

- \( y = 4x - 2 \)
- \( C = (6, 5) \) and \( m_{radius} = -\frac{1}{4} \)
- \( y - 5 = -\frac{1}{4}(x - 6) \)
- \( \text{start to solve sim. equations} \)
- \( x = 2, y = 6 \)
- \( \text{check that} (2, 6) \text{ lies on the circle} \)

### Cave

- Look out for candidates who use \( y = -\frac{1}{4}x + \frac{5}{2} \) instead of \( y = 4x - 2 \) leading to point of contact of (5, 1). This is worth 5 marks.

### Notes

1. *5* is only available after an attempt has been made to find the gradient from differentiation
2. alternatives for *9*
   - \( (x - 2)(17x - 34) = 0 \)
3. alternatives for *10*
   - \( x = 2, 2 \Rightarrow \text{tangent} \)
   - \( x = 2 \) only \( \Rightarrow \text{tangent} \)
4. alternative for *9* and *10*
   - \( b^2 - 4ac = 68^2 - 4 \times 17 \times 68 \)
   - \( = 68^2 - 68^2 = 0 \Rightarrow \text{tangent} \)
5. alternative for *10* and *11*
   - \( x = 2, y = 6 \) and \( m_{radius} = -\frac{1}{4} \)
   - \( m_1m_2 = 4 \times -\frac{1}{4} = -1 \Rightarrow \text{line is tangent} \)
6. For notes 2, 3 and 4 it is acceptable to deal with the reduced quadratic \( x^2 - 4x + 4 = 0 \).
7. an "0" must occur somewhere between *7* and *9*
5 The diagram shows part of the sketch of a function $f$.

\[ f \text{ has a minimum turning point at } (0, -3) \text{ and a point of inflexion at } (-4, 2). \]

(a) Sketch the graph of $y = f(-x)$.

(b) On the same diagram sketch the graph of $y = 2f(-x)$.

</tr>
</tbody>
</table>

Notes cont

10 If the *4 answer is in radians, the mark is lost.
If the *6 answer is in radians, the mark is lost.
If both answers at *4 and *6 are in radians, only penalise once.

Notes

1 Candidates may use any form eg \( k\sin(x - a) \) as long as the final answer is in the form \( k\sin(x + a) \). If not they lose *4.
2 For *1 treat \( k\sin x \cos a + \cos x \sin a \) as bad form provided you see \( k\cos(a^2) \) and \( k\sin(a^2) \) appearing for *2.
3 For *1 accept \( k\sin x \cos a + \cos x \sin a \).
4 For *4 accept any answer which rounds to 68.
5 The following are acceptable for *5

| *5 | \( \sin(x + 68.2^\circ) = -1 \) or \( x + 68.2 = 270 \) |

6 candidates who use differentiation for (b) will most likely lose 1 mark for omitting the factor \( \frac{\sqrt{29}}{10} \).

7 \( (201.8^\circ, -\sqrt{29}) \) with no working at all may earn marks *6 and *7.

8 \( (-\sqrt{29}, 201.8^\circ) \) with no working at all may earn mark *7.

9 See page 16 for advice on solutions obtained via a graphics calculator.
8 An open water tank, in the shape of a triangular prism, has a capacity of 108 litres. The tank is to be lined on the inside in order to make it watertight.

The triangular cross-section of the tank is right-angled and isosceles, with equal sides of length \( x \) cm.

The tank has a length of 1 cm.

(a) Show that the surface area to be lined, \( A \) cm\(^2\), is given by

\[ A(x) = x^2 + \frac{432000}{x}. \]

(b) Find the value of \( x \) which minimises this surface area.

<table>

2. **ic** : start proof
3. **ic** : complete proof
4. **ss** : know to set derivative to zero
5. **pd** : express in standard form
6. **pd** : differentiate
7. **pd** : solve
8. **ic** : justify minimum

**Notes**

1. Evidence of the nature table should take the form

<table>
<thead>
<tr>
<th>( x )</th>
<th>60(^-)</th>
<th>60</th>
<th>60(^+)</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \frac{df}{dx} )</td>
<td>-ve</td>
<td>0</td>
<td>+ve</td>
</tr>
<tr>
<td>( \frac{df}{dx} )</td>
<td>( \frac{df}{dx} ) = 2 + 864000 ( x )^{-3}</td>
<td>60(^-)</td>
<td>60</td>
</tr>
</tbody>
</table>

2. For \( \frac{df}{dx} \), the second derivative is acceptable

3. A trial and error approach earns no marks

4. The " = 0" shown at \( \frac{df}{dx} \) must appear somewhere for \( \frac{df}{dx} \) to be awarded (but not necessarily at \( \frac{df}{dx} \) stage)

5. If a candidate uses an incorrect formula then only *4, *5 and *6 are available i.e. maximum score would be 3 marks. To score 3 marks, working has to be of a similar difficulty.
9 The diagram shows vectors $a$ and $b$.  
If $|a| = 5$, $|b| = 4$ and $a \cdot (a + b) = 36$, find the size of the acute angle $\theta$ between $a$ and $b$.

| 3.1.9 Ca BA 03/115 |  
|---|---|---|---|---|
| ans: 56.6° | 4 marks |

- $^1$ ss: use distributive law
- $^2$ pd: expand scalar product
- $^3$ pd: expand scalar product
- $^4$ pd: complete calculations

\[
a \cdot (a + b) = a \cdot a + a \cdot b \\
a \cdot b = 5 \times 4 \cos(\theta) \\
a \cdot a = 5^2 \\
\cos(\theta) = 0.55 \\
\Rightarrow \quad \theta = 56.6° \approx 0.99 \text{ radians}
\]

**Example 1**

\[
a \cdot (a + b) = a^2 + ab \\
a \cdot b = 5 \times 4 \cos(\theta) \\
a^2 = 5^2 \\
\theta = 56.6°
\]

4 marks given

**Example 2**

\[
a \cdot a + a \cdot b = 36 \\
25 \cos(\theta) + 20 \cos(\theta) = 36 \\
\cos(\theta) = \frac{36}{35} \\
\theta = 36.9°
\]

2 marks given

**Example 3 CAVE**

\[
\cos(\theta) = \frac{|a| \cdot |b|}{a \cdot b} \\
= \frac{36}{35} \\
\theta = 56.3°
\]

0 marks given

Notes:

1. Using "$a \cdot b = |a| \cdot |b| \sin(\theta)$" loses 1 mark
<table>

</table>

**Example 1**

\[
6 \cos^2(x) + 10 \cos(x) - 2 = 0
\]

leading to

\[
\cos(x) = 0.180 \quad \text{or} \quad \cos(x) = -1.84
\]

\[
x = 1.39 \text{ radians no solution}
\]

4 marks given

Notes

1 alternative for *3

\[
\cos(x) = \frac{-10 \pm \sqrt{10^2 - 4 \times 6 \times (-2)}}{2 \times 6}
\]

2 *5 must include some indication that $\cos(x) = -2$ has no solutions.

3 in the event of other substitutions being used for $\cos(2x)$, no credit can be given until the equation reduces to a quadratic in $\cos(x)$.

4 *4 and *5 are only available as a consequence of solving a quadratic equation.

5 *4 and *5 may also be marked as follows

\[
\cos(x) = \frac{1}{2} \quad \text{and} \quad x = 1.23
\]

\[
\cos(x) = -2 \quad \text{and} \quad \text{no solution}
\]

6 For *5, accept $70.5^\circ$ in lieu of 1.23

7 If an answer starts

\[
3 \times 2 \cos^2(x) - 1 + 10 \cos(x) - 1 = 0
\]

\[
6 \cos^2(x) + 10 \cos(x) - 4 = 0
\]

then treat the first line as bad form.

If an answer starts

\[
3 \times 2 \cos^2(x) - 1 + 10 \cos(x) - 1 = 0
\]

\[
6 \cos^2(x) + 10 \cos(x) - 2 = 0
\]

then use Example 1.
11 (a) (i) Sketch the graph of \( y = ax^2 + 1, a > 2. \)
(ii) On the same diagram sketch the graph of \( y = a^{x+1}, a > 2. \)
(b) Prove that the graphs intersect at a point where the x-coordinate is \( \log_a \left( \frac{1}{a-1} \right). \)

<table>
<thead>

<tr>
<td>2 ic: sketch expo function</td>
<td>1 mark</td>
</tr>
<tr>
<td>3 ss: know to equate for intersection</td>
<td>1 mark</td>
</tr>
<tr>
<td>4 pd: start to solve - crucial step</td>
<td>1 mark</td>
</tr>
<tr>
<td>5 ic: complete proof</td>
<td>1 mark</td>
</tr>
</tbody>
</table>

Notes
1. For *2, the second graph must cut the y-axis above (0, 2) and must finish up between the first graph and the x-axis as x tends to minus infinity.
   '2' and 'a' must be marked on the y-axis.
2. Both graphs correct but with no annotation may be awarded 1 mark.

Alternative 1

\[ x = \log_a \left( \frac{1}{x-1} \right) \]

**1** √

\[ y = ax^2 + 1 \]
\[ y = a^{x+1} \]
\[ = \frac{1}{x-1} + 1 \]
\[ = a^{x+1} \]
\[ = \frac{a}{x-1} \]
\[ = \frac{ax}{x-1} \]
\[ \therefore \text{curves intersect at } \left( \log_a \left( \frac{1}{x-1} \right), \frac{x}{x-1} \right) \]

**3** √

3 marks given

Alternative 1

\[ x = \log_a \left( \frac{1}{x-1} \right) \]

**1** √

\[ \frac{1}{x-1} = a^\frac{1}{x-1} \]
\[ 1 = a^\frac{1}{x-1} (a-1) \]
\[ 1 = a^\frac{x+1} - a^\frac{x}{x-1} \]

Hence the graphs intersect

**3** √

3 marks given

   \[ f(2) = 48 - 20 - 34 + 6 = 0 \]

(b) \( \star \)
   For a sketch of the cubic with the zeroes indicated at \( 2, \frac{1}{3} \text{ and } -\frac{1}{3} \)
   and the statement: the roots are \( 2, \frac{1}{3} \text{ and } -\frac{1}{3} \).

\[ \star \text{ so } f(x) = k(x-2)(x+\frac{1}{3})(x-\frac{1}{3}) \]
   By comparing the leading terms, for example, of
   \[ f(x) = k(x-2)(x+\frac{1}{3})(x-\frac{1}{3}) \]
   \[ f(x) = 6x^3 - 5x^2 - 17x + 6 \]
   We have \( k = 6 \)
   and so \( f(x) = (x-2)(3x+3)(3x-1) \) **explicitly stated**

7. The graphics calculator plot shows the following

\( y = 2 \sin(x^0) + 5 \cos(x^0) \)

(a) \( \star \) **Annotated on diagram**
   Max at \((21.8^0, 5.4)\) and min at \((201.8^0, -5.4)\)

(b) \( \star \) **Annotated on diagram**
   \((-88.2^0, 0) \text{ or } (291.8^0, 0)\)

(c) \( \star \) "From the amplitude \( k = 5.4^0 \)"

(d) \( \star \) "From the left shift \( a = 68.2^0 \)"

(b) \( \star, \star \)
   \( P = (201.8^0, -5.4) \)

\( \star \) The last mark has to be awarded for some communication about the minimum e.g. the minimum should occur at 270 shifted left by 68.2
1 After a leaflet drop advertising a new garden centre, a random sample of households were surveyed. The results are summarised in the following table.

<table>
<thead>
<tr>
<th>Visited the centre</th>
<th>Read the leaflet</th>
<th>Did not read the leaflet</th>
</tr>
</thead>
<tbody>
<tr>
<td>80</td>
<td>60</td>
<td>20</td>
</tr>
</tbody>
</table>

(a) Find
(i) $P($leaflet read$)$
(ii) $P($leaflet read and garden centre visited$)$

(b) Comment on whether the proportion who had visited the garden centre was the same whether or not they had read the leaflet.

<table>
<thead>
<tr>
<th>S1</th>
<th>4.1.1, 4.1.3</th>
<th>CN</th>
<th>CA 03/new</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ans: $\frac{45}{50}$, $\frac{60}{80}$</td>
<td>2 marks</td>
<td>3 marks</td>
<td></td>
</tr>
<tr>
<td>Ans: comment</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>$^1$ ic: interpret table</td>

<tr>
<td>$^4$ ic: interpret sample</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>$^5$ ic: comment</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

$^1$ $\frac{45}{50}$

$^2$ $\frac{60}{80}$

$^3$ $\frac{45}{50} = 0.57$

$^4$ $\frac{60}{80} = 0.33$ & not the same

$^5$ seems that the leaflet had some effect
2 The scatter diagrams A and B show the scores of ten players in an open golf championship.

(a) In diagram A, \( \Sigma x = 716 \), \( \Sigma x^2 = 51338 \), \( \Sigma y = 689 \), \( \Sigma y^2 = 47521 \), \( \Sigma xy = 49351 \).

Calculate the correlation coefficient.

(b) In diagram B, the correlation coefficient is 0.694. Comment on the relationship between

(i) the scores on days 1 and 2

(ii) the scores on days 3 and 4.

*3 \( r = 0.3126 \)

*4 no linear relationship

*5 moderate linear relationship
3 The regulations for a charity state that the Board of Trustees must consist of 6 people.
(a) How many ways are there of choosing 6 members from 10 nominations?
Ideally the Board should consist of four employees of the charity and two persons not employed by the charity (i.e. volunteers).
Ten people have been nominated for the Board. Six are employees and four are volunteers.
(b) If each nominee has an equally likely chance of being selected, what is the probability that the six members elected will form the ideal choice, that is four employees and two volunteers?
