2002 Mathematics

Higher – Paper 1

Finalised Marking Instructions
1. Marks must be assigned in accordance with these marking instructions. In principle, marks are awarded for what is correct, rather than marks deducted for what is wrong.

2. Award one mark for each ‘bullet’ point. Each error should be underlined in RED at the point in the working where it first occurs, and not at any subsequent stage of the working.

3. The working subsequent to an error must be followed through by the marker with possible full marks for the subsequent working, provided that the difficulty involved is approximately similar. Where, subsequent to an error, the working is eased, a deduction(s) of mark(s) should be made.

   This may happen where a question is divided into parts. In fact, failure to even answer an earlier section does not preclude a candidate from assuming the result of that section and obtaining full marks for a later section.

4. Correct working should be ticked (✓). This is essential for later stages of the SQA procedures. Where working subsequent to an error(s) is correct and scores marks, it should be marked with a crossed tick (✗). In appropriate cases attention may be directed to work which is not quite correct (e.g. bad form) but which has not been penalised, by underlining with a dotted or wavy line.

   Work which is correct but inadequate to score any marks should be corrected with a double cross tick (✗✓).

5. • The total mark for each section of a question should be entered in red in the outer right hand margin, opposite the end of the working concerned.

   • Only the mark should be written, not a fraction of the possible marks.

   • These marks should correspond to those on the question paper and these instructions.

6. It is of great importance that the utmost care should be exercised in adding up the marks. Where appropriate, all summations for totals and grand totals must be carefully checked.

   Where a candidate has scored zero marks for any question attempted, “0” should be shown against the answer.

7. As indicated on the front of the question paper, full credit should only be given where the solution contains appropriate working. Accept answers arrived at by inspection or mentally where it is possible for the answer so to have been obtained. Situations where you may accept such working will normally be indicated in the marking instructions.

cont/
8. Do not penalise:
   • working subsequent to a correct answer
   • omission of units
   • bad form
   • legitimate variations in numerical answers
   • correct working in the “wrong” part of a question

9. No marks should be awarded for a part of an answer which shows a complete misunderstanding of any fundamental principle or complete ignorance of any process involved in that part.

10. If in doubt between two marks, give an intermediate mark, but without fractions. When in doubt between consecutive numbers, give the higher mark.

11. In cases of difficulty covered neither in detail nor in principle in the Instructions, attention may be directed to the assessment of particular answers by making a PA referral. Write PA at the top left of the front cover of the script and complete the PA referral sheet. This reference must be restricted to genuine cases of difficulty. Also, write the letters “PA” (in red) on Form Ex6 immediately after the candidate’s name.

12. No marks should be deducted at this stage for careless or badly arranged work. In cases where the writing or arrangement is very bad, a note may be made on the upper left-hand corner of the front cover of the script.

13. Do not write any comments on the scripts. A summary of acceptable notation is given on page 4.

Summary

<table>
<thead>
<tr>
<th>Throughout the examination procedures many scripts are remarked. It is essential that markers follow common procedures:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. <strong>Tick</strong> correct working.</td>
</tr>
<tr>
<td>2. Put a mark in the <strong>right-hand margin to match the marks allocations on the question paper</strong>.</td>
</tr>
<tr>
<td>3. Do not write marks as fractions.</td>
</tr>
<tr>
<td>4. Put each mark <strong>at the end</strong> of the candidate’s response to the question.</td>
</tr>
<tr>
<td>5. <strong>Follow through</strong> errors to see if candidates can score marks subsequent to the error.</td>
</tr>
<tr>
<td>6. Do not write any comments on the scripts.</td>
</tr>
</tbody>
</table>
Higher Mathematics: A Guide to Standard Signs and Abbreviations

Remember - No comments on the scripts. Please use the following and nothing else.

**Signs**

- ✔ The tick. You are not expected to tick every line but of course you must check through the whole of a response.

- ✗ The cross and underline. Underline an error and place a cross at the end of the line.

- ✗ The tick-cross. Use this to show correct work where you are following through subsequent to an error.

- ✗ The double cross-tick. Use this to show correct work but which is inadequate to score any marks.

- ▲ The roof. Use this to show something is missing such as a crucial step in a proof or a 'condition' etc.

- — The tilde. Use this to indicate a minor transgression which is not being penalised (such as bad form).

**RE** Repeated error (which would generally not be penalised within the same question).

**BoD** Benefit of Doubt. Use this where you have to decide between two consecutive marks and award the higher.

**EA** Eased. Where working is found correct whilst following through subsequent to an error, the working has been eased sufficiently for a mark not to be awarded.

<table>
<thead>
<tr>
<th>Marks being allotted e.g. (●) would not normally be shown on scripts</th>

<td>( \log_{10}(x - 2) = 1 ) ✗</td>
<td></td>
</tr>
<tr>
<td>( x - 2 = 3 ) ✗</td>
<td></td>
</tr>
<tr>
<td>( x = 5 ) EA ✗</td>
<td>1</td>
</tr>
</tbody>
</table>

All of these are to help us be more consistent and accurate.

It goes without saying that however accurate you are in marking, it is to no avail unless you have added the marks up correctly. Please double check totals!!

<td>ic</td>
</tr>
</tbody>
</table>

Notes
1. •4 is not available unless an attempt has been made to find a perpendicular gradient.
2. •2, •3 and •4 are not available to candidates who incorrectly attempt to use calculus.
3. Please make a PA referral for any candidate who uses implicit differentiation correctly.
4. •4 is not available unless the gradient e.g. \(\left(-\frac{1}{2}\right)\) has been simplified.

Example

\[
\begin{array}{ccc}
C = (1,-1) & \checkmark & \times \\
m_{\text{rad}} = 4 & \times & \checkmark \cdot 2 \\
m_{\text{pl}} = -\frac{1}{2} & \times & \checkmark \cdot 3 \\
y - 3 = -\frac{1}{2}(x - 2) & \checkmark & \times \cdot 4 \\
3 \text{ marks given}
\end{array}
\]
2. The point Q divides the line joining P(-1, -1, 0) to R(5, 2, -3) in the ratio 2 : 1.

Find the coordinates of Q.

<table>
<thead>
<tr>
<th>3.1.6</th>

</tbody>
</table>

1. pd : find vector components
2. ss : use parallel vectors
3. pd : process vectors

$\overrightarrow{PR} = \begin{pmatrix} 6 \\ 3 \\ -3 \end{pmatrix}$

$\overrightarrow{PQ} = \frac{1}{3} \overrightarrow{PR}$

$Q = (3, 1, -2)$

Note

1. An incorrect ratio loses *2
2. Treat $Q = \begin{pmatrix} 3 \\ 1 \\ -2 \end{pmatrix}$ as bad form.
3. The coordinates of Q are only worth *3. So an answer with no working is only worth 1 mark (ie *3).
4. The justification (ie *1 and *2) may take the form of a diagram eg below are two examples of a diagram and the answer for Q. Each may be awarded 3 marks.

Further examples

1. $\overrightarrow{PR} = \begin{pmatrix} 6 \\ 3 \\ -3 \end{pmatrix}$
   *1

2. $\overrightarrow{PQ} = \frac{1}{3} \overrightarrow{PR}$
   *2

3. $Q = (3, 1, -2)$
   *3

4. $q - p = 2(r - q)$
   *1

5. $\overrightarrow{PQ} = 2 \overrightarrow{QR}$

6. $\overrightarrow{QR}$

7. $Q = (3, 1, -2)$

8. $Q = (3, 1, -2)$

9. 3 marks

<td>( 2x = 0, 180, 360, \ldots 720 )</td>
</tr>
<tr>
<td></td>
<td>( x = 90, 180, 270, 360 ) ( \times )</td>
</tr>
</tbody>
</table>

Notes
1. 1 mark may be given for \( f(2x) \) and \( g(\sin x^o) \) where final \( f \) and \( g \) are both wrong.
2. Example 2 illustrates an easing where a mark is not awarded (although the working is correct).
Similarly, solving \( \cos(x^o) = 1 \ldots x = 0 \) or 360 would be considered as easing the working.

Examples

1

\[ 2 \sin(2x^o) = 2 \sin(x^o) \checkmark \]
\[ 2 \times 2 \sin x^o \cos x^o = 2 \sin x^o \checkmark \]
\[ 2 \cos(x^o) = 1 \times \]
\[ \cos x^o = \frac{1}{2} \checkmark \]
\[ x = 60, 300 \checkmark \]

3 marks

2

\[ g(f(x)) = \sin(2x^o) \times \]
\[ f(g(x)) = 2 \sin(x^o) \checkmark \]
\[ 2 \times 2 \sin(x^o) = \sin(2x^o) \checkmark \]
\[ \text{appearance of } 2 \sin(x^o) \cos(x^o) \checkmark \]
\[ 2 \sin(x^o)(2 - \cos(x^o)) = 0 \checkmark \]
\[ \sin(x^o) = 0 \text{ and } 0, 180, 360 \checkmark \]
\[ \cos(x^o) = 2 \text{ and no solution} \checkmark \]

5 marks

Examples: some endings

3

\[ 2 \sin x^o \cos x^o = 0 \]
\[ \sin(2x^o) = 0 \times \]
\[ 2x = 0, 180, 360, \ldots 720 \]
\[ x = 90, 180, 270, 360 \times \]

\[ \times \]

4

\[ 2 \sin x^o \cos x^o = 0 \]
\[ \sin x^o = 0 \text{ and } \cos x^o = 0 \times \]
\[ x = 0, 180, 360 \text{ and } 90, 270 \times \]

\[ \times \]
4 Find the coordinates of the point on the curve \( y = 2x^2 - 7x + 10 \) where the tangent to the curve makes an angle of \( 45^\circ \) with the positive direction of the x-axis.

4
\[ \begin{align*}
\text{ans: } & (2, 4) \\
\text{sp: } & \text{know to diff and differentiate} \\
\text{pd: } & \text{process gradient from angle} \\
\text{ss: } & \text{equate equivalent expressions} \\
\text{pd: } & \text{solve and complete}
\end{align*} \]

**Notes**

1 Simply stating that \( \tan 45^\circ = 1 \) earns no marks.

**Examples**

1
\[ \begin{align*}
\frac{dy}{dx} &= 4x - 7 & \checkmark & 1 \\
4x - 7 &= 0 & \times & \\
x &= \frac{7}{4} & \checkmark & 4 \\
y &= 3 \frac{7}{4} & \times & 2 \text{ marks}
\end{align*} \]

2
\[ \begin{align*}
y &= x + c & \checkmark & 1 \\
2x^2 - 8x + 10 - c &= 0 & \checkmark & 2 \\
\Delta &= 64 - 8(10 - c) = 0 & \checkmark & 3 \\
c &= 2 \text{ and point } (2, 4) & \checkmark & 4 \text{ marks}
\end{align*} \]

5 In triangle ABC, show that the exact value of \( \sin(a + b) \) is \( \frac{2}{\sqrt{5}} \).

5
\[ \begin{align*}
\text{ans: } & \text{proof} \\
\text{pd: } & \text{process the missing sides} \\
\text{ss: } & \text{expand} \\
\text{pd: } & \text{substitute} \\
\text{pc: } & \text{process & complete proof}
\end{align*} \]

**Notes**

1 Partial credit: 2 marks may be given for either of \( \frac{1}{\sqrt{2}} \cos b + \frac{1}{\sqrt{2}} \sin b \) or \( \frac{1}{\sqrt{2}} \sin a + \frac{1}{\sqrt{2}} \cos a \).

2 At 4 the completion of the proof might be as
\[ \frac{4}{\sqrt{20}} = \frac{2}{\sqrt{5}} \text{ OR } \frac{4}{\sqrt{20}} = \frac{2}{\sqrt{5}} = \frac{1}{\sqrt{5}}. \]
The graph of a function $f$ intersects the x-axis at $(-a, 0)$ and $(c, 0)$ as shown. There is a point of inflexion at $(0, b)$ and a maximum turning point at $(c, d)$.

Sketch the graph of the derived function $f'$. 

### 1.2.4

**ans: sketch** 3 marks

- **1** ic: interpret stationary points
- **2** ic: interpret main body of $f$
- **3** ic: interpret tails of $f$

- **1** roots at 0 and c (accept a statement to this effect) ic
- **2** min at LH root, max between roots ic
- **3** both 'tails' correct ic

### Examples

- award 1 mark
- award 1 mark
- award 1 mark
- award 1 mark
- award 2 marks
7 (a) Express \( f(x) = x^2 - 4x + 5 \) in the form \( f(x) = (x - a)^2 + b \). 

(b) On the same diagram sketch (i) the graph of \( y = f(x) \) (ii) the graph of \( y = 10 - f(x) \). 

(c) Find the range of values of \( x \) for which \( 10 - f(x) \) is positive.

---

**Illustrations for awarding each**

- **pd**: \( a = 2 \)
- **pd**: \( b = 1 \)
- **ic**: any 2 from parabola; min tp(2,1); (0,5) 
- **ic**: the remaining one from above list
- **ss**: reflecting in \( x \)-axis
- **ss**: translating +10units \( \text{from} \) to \( y \)-axis
- **ic**: \( (-1,5) \) \( \text{ie} \ -1 < x < 5 \)

**Answer**

![Graph](image)

**Note**

1. At \( \#7 \), do not penalise \(-1 \leq x \leq 5 \)
2. If transformations done in wrong order, then \( \#6 \) is not available.
3. Accept phrase "reflect in \( x \)-axis and then translate up 10 units" for 1 mark (in lieu of \( \#5 \) and \( \#6 \)).
4. Either of the two diagrams below illustrates the minimum requirements for \( \#5 \) and \( \#6 \).

![Diagrams](image)

5. \( \#5 \) and \( \#6 \) are still available for candidates who do not produce a parabola at \( \#3/\#4 \) stage. However a straight line would be a case of easing the working and so for a straight line a maximum of 1 mark (from \( \#5 \) & \( \#6 \)) could be awarded for a correct reflection and translation.
Give 1 mark for each •  Illustrations for awarding each •

8 The diagram shows the graph of a cosine function from 0 to π.
   (a) State the equation of the graph.
   (b) The line with equation \( y = -\sqrt{3} \) intersects this graph at points A and B. Find the coordinates of B.

<table>

</tr>
</thead>
<tbody>
<tr>
<td>a ans: ( y = 2\cos 2x )</td>
<td>1 mark</td>
</tr>
<tr>
<td>b ans: ( B\left(\frac{7\pi}{6}, -\sqrt{3}\right) )</td>
<td>3 marks</td>
</tr>
</tbody>
</table>

- \(^1\) ic: interpret graph
- \(^2\) ss: equate equal parts
- \(^3\) pd: solve linear trig equation in radians
- \(^4\) ic: interpret result

\[ 2\cos 2x = -\sqrt{3} \]
\[ 2x = \frac{5\pi}{6}, \frac{7\pi}{6} \]
\[ x = \frac{7\pi}{12} \]

Notes
1. \(^2\) is available for whatever function is obtained in (a).
2. As a consequence of an incorrect function at \(^1\),
   for \(^4\) to be available, the two roots from \(^3\) must lie as follows:
   1 root lies in the interval 0...\(\pi/2\) and
   1 root lies in the interval \(\pi/2...\pi\).
3. \( x = 105^\circ \) does not earn \(^4\)

Examples

1. \( y = \frac{2\cos x}{\cos x} \)
   \(2 \cos x = -\sqrt{3}\)
   \(\cos x = -\frac{\sqrt{3}}{2}\)
   \(x = \frac{5\pi}{6}, \frac{7\pi}{6}\)
   \(x = ...\)

2 marks max. (The answers bear no relation to diagram)

2. \( y = \frac{2\cos x}{\cos x} \)
   \(2 \cos x = -\sqrt{3}\)
   \(\cos x = -\frac{\sqrt{3}}{2}\)
   \(x = 150^\circ, 210^\circ\)
   \(x = ...\)

2 marks max. (The answers bear no relation to diagram)
9 (a) Write \( \sin(x) - \cos(x) \) in the form \( k\sin(x - a) \) stating the values of \( k \) and \( a \) where \( k > 0 \) and \( 0 \leq a \leq 2\pi \).

(b) Sketch the graph of \( y = \sin(x) - \cos(x) \) for \( 0 \leq x \leq 2\pi \), showing clearly the graph's maximum and minimum values and where it cuts the \( x \)-axis and the \( y \)-axis.

\[ t^2 = 1^2 + 1^2 \Rightarrow t = \sqrt{2} \]

\( \sin x - \cos x = \sqrt{2} \left( \sin x \times \frac{1}{\sqrt{2}} - \cos x \times \frac{1}{\sqrt{2}} \right) \)

\( = \sqrt{2} \left( \sin x \cos \frac{\pi}{4} - \cos x \sin \frac{\pi}{4} \right) \)

\( = \sqrt{2} \sin (x - \frac{\pi}{4}) \)
Give 1 mark for each • Illustrations for awarding each •

10. (a) Find the derivative of the function \( f(x) = (8 - x^3)^{\frac{1}{3}} \), \( x < 2 \).

(b) Hence write down \( \int \frac{x^2}{(8 - x^3)^{\frac{1}{3}}} \, dx \).

</table>

• pd : process differentiation
• pd : use the chain rule
• ic : interpret answer from (a)

11. The graph illustrates the law \( y = kx^n \).
   If the straight line passes through A(0.5, 0) and B(0, 1), find the values of \( k \) and \( n \).

<table>
<thead>
<tr>
<th>11</th>
<th>3.3.7</th>
<th>NC AB 02/77</th>
</tr>
</thead>
<tbody>
<tr>
<td>ans: ( y = 5x^{-2} )</td>
<td>4 marks</td>
<td></td>
</tr>
</tbody>
</table>

• ic : interpret graph
• ss : use log laws
• pd : solve log equation

\[
\begin{align*}
\log_5 y &= -2(\log_5 x) + 1 \\
\log_5 y + \log_5 x^2 &= 1 \\
\log_5 (yx^2) &= 1 \\
yx^2 &= 5 \quad \text{so} \quad k = 5, n = -2
\end{align*}
\]

Note: Do not accept \( \frac{1}{-\frac{1}{2}} \) for the value of \( n \).

Examples

1. No 'theory', just
   gradient = \(-2\) so \( n = -2 \) \( \checkmark \) \( *3 \)
   intercept = 1
   \( \log_5 k = 1 \) so \( k = 5 \) \( \checkmark \) \( *4 \)

2 marks max.

2. \( \log_5 y = -2(\log_5 x) + 1 \) \( \checkmark \) \( *1 \)
   \( \log_5 y + \log_5 x^2 = 1 \) \( \checkmark \) \( *2 \)
   \( \log_5 (yx^2) = 1 \) \( \checkmark \) \( *3 \)
   \( yx^2 = 5 \) so \( k = 5, n = -2 \) \( \checkmark \) \( *4 \)

4 marks

3. \( \log \, y = (\log \, kx^n) \) \( \checkmark \) \( *1 \)
   \( \log \, y = n \log \, x + \log \, k \) \( \checkmark \) \( *2 \)
   gradient = \(-2\) so \( n = -2 \) \( \checkmark \) \( *3 \)
   intercept = 1
   \( \log_5 k = 1 \) so \( k = 5 \) \( \checkmark \) \( *4 \)

4 marks

4. \( \log \, y = n \log \, x + \log \, k \) \( \checkmark \) \( *2 \)
   followed by sim. equations
   \( 1 = n \times 0 + \log \, k \)
   \( 0 = n \times (\frac{1}{2}) + \log \, k \)
   leads to
   \( n = -2 \) \( \checkmark \) \( *3 \)
   \( \log_5 k = 1 \) so \( k = 5 \) \( \checkmark \) \( *4 \)

4 marks
for the Mathematics with Statistics paper
Replacing Maths qu 2, 9 & 10.11.

2 In a survey for a supermarket, 1000 customers were asked to answer these two questions:
   A: Would you use the supermarket more often if there were facilities for selling petrol?
   B: Would you use the supermarket more often if there were facilities for processing films?
Some of the results are recorded in the table below.

Would either of the two eldest people be considered as an outlier for this distribution?

11 Andrew throws a dart at a circular target of radius \( a \) cm. The random variable \( X \) represents the distance a dart lands from the centre of the circle. All points in the circle are equally likely to be hit by the dart.

(a) Find \( P(X < x) \), the probability that a dart lands less than \( x \) cm from the centre of the circle.

(b) Show that the probability density function for the distribution of the distance of a dart from the centre is

\[
f(x) = \begin{cases} 
\frac{2x}{a^2} & 0 \leq x \leq a \\
0 & \text{otherwise}.
\end{cases}
\]

(c) Find the mean and variance of this distribution.

</table>
2002 Mathematics
Higher – Paper 2
Finalised Marking Instructions
1. Marks must be assigned in accordance with these marking instructions. In principle, marks are awarded for what is correct, rather than marks deducted for what is wrong.

2. Award one mark for each 'bullet' point. Each error should be underlined in RED at the point in the working where it first occurs, and not at any subsequent stage of the working.

3. The working subsequent to an error must be followed through by the marker with possible full marks for the subsequent working, provided that the difficulty involved is approximately similar. Where, subsequent to an error, the working is eased, a deduction(s) of mark(s) should be made.
   This may happen where a question is divided into parts. In fact, failure to even answer an earlier section does not preclude a candidate from assuming the result of that section and obtaining full marks for a later section.

4. Correct working should be ticked (√). This is essential for later stages of the SQA procedures. Where working subsequent to an error(s) is correct and scores marks, it should be marked with a crossed tick (✗). In appropriate cases attention may be directed to work which is not quite correct (e.g. bad form) but which has not been penalised, by underlining with a dotted or wavy line.
   Work which is correct but inadequate to score any marks should be corrected with a double cross tick (✗✗).

5. • The total mark for each section of a question should be entered in red in the outer right hand margin, opposite the end of the working concerned.
   • Only the mark should be written, not a fraction of the possible marks.
   • These marks should correspond to those on the question paper and these instructions.

6. It is of great importance that the utmost care should be exercised in adding up the marks. Where appropriate, all summations for totals and grand totals must be carefully checked.
   Where a candidate has scored zero marks for any question attempted, "0" should be shown against the answer.

7. As indicated on the front of the question paper, full credit should only be given where the solution contains appropriate working. Accept answers arrived at by inspection or mentally where it is possible for the answer so to have been obtained.
   Situations where you may accept such working will normally be indicated in the marking instructions.
8. Do not penalise:
   - working subsequent to a correct answer
   - omission of units
   - bad form
   - legitimate variations in numerical answers
   - correct working in the "wrong" part of a question

9. No marks should be awarded for a part of an answer which shows a complete
   misunderstanding of any fundamental principle or complete ignorance of any
   process involved in that part.

10. If in doubt between two marks, give an intermediate mark, but without fractions.
    When in doubt between consecutive numbers, give the higher mark.

11. In cases of difficulty covered neither in detail nor in principle in the Instructions,
    attention may be directed to the assessment of particular answers by making a PA
    referral. Write PA at the top left of the front cover of the script and complete the PA
    referral sheet. This reference must be restricted to genuine cases of difficulty.
    Also, write the letters "PA" (in red) on Form Ex6 immediately after the candidate's
    name.

12. No marks should be deducted at this stage for careless or badly arranged work. In
    cases where writing or arrangement is very bad, a note may be made on the
    upper left-hand corner of the front cover of the script.

13. Do not write any comments on the scripts. A summary of acceptable notation is
    given on page 4.

Summary

| Throughout the examination procedures many scripts are remarked. It is essential that markers follow common procedures: |
| 1  Tick correct working. |
| 2  Put a mark in the right-hand margin to match the marks allocations on the question paper. |
| 3  Do not write marks as fractions. |
| 4  Put each mark at the end of the candidate's response to the question. |
| 5  Follow through errors to see if candidates can score marks subsequent to the error. |
| 6  Do not write any comments on the scripts. |
Higher Mathematics: A Guide to Standard Signs and Abbreviations

Remember - No comments on the scripts. Please use the following and nothing else.

<table>
<thead>
<tr>
<th>Signs</th>
<th>Marks being allotted e.g. (•) would not normally be shown on scripts</th>
</tr>
</thead>
<tbody>
<tr>
<td>✓ The tick. You are not expected to tick every line but of course you must check through the whole of a response.</td>
<td></td>
</tr>
<tr>
<td>✗ The cross and underline. Underline an error and place a cross at the end of the line.</td>
<td></td>
</tr>
<tr>
<td>✗ The tick-cross. Use this to show correct work where you are following through subsequent to an error.</td>
<td></td>
</tr>
<tr>
<td>✗ The double cross-tick. Use this to show correct work but which is inadequate to score any marks.</td>
<td></td>
</tr>
<tr>
<td>✷ The roof. Use this to show something is missing such as a crucial step in a proof or a 'condition' etc.</td>
<td></td>
</tr>
<tr>
<td>❀ The tilde. Use this to indicate a minor transgression which is not being penalised (such as bad form).</td>
<td></td>
</tr>
<tr>
<td>RE Repeated error (which would generally not be penalised within the same question).</td>
<td></td>
</tr>
<tr>
<td>BoD Benefit of Doubt. Use this where you have to decide between two consecutive marks and award the higher.</td>
<td></td>
</tr>
<tr>
<td>EA Eased. Where working is found correct whilst following through subsequent to an error, the working has been eased sufficiently for a mark not to be awarded.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

All of these are to help us be more consistent and accurate.

It goes without saying that however accurate you are in marking, it is to no avail unless you have added the marks up correctly. Please double check totals!!
Triangle ABC has vertices A(−1, 6), B(−3, −2) and C(5, 2). Find
(a) the equation of the line p, the median from C of triangle ABC.
(b) the equation of the line q, the perpendicular bisector of BC.
(c) the coordinates of the point of intersection of the lines p and q.

<table>
<thead>
<tr>
<th>Illustrations of evidence for awarding each mark</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. F = mid ( AB = (−2,2) ) ( \text{ss} )</td>
</tr>
<tr>
<td>2. ( m_{BC} = 0 ) stated or implied by ( \text{ss} )</td>
</tr>
<tr>
<td>3. ( \text{equ FC is } y = 2 ) ( \text{ic} )</td>
</tr>
<tr>
<td>4. ( M = \text{mid } AC = (1,0) ) ( \text{ss} )</td>
</tr>
<tr>
<td>5. ( m_{BC} = \frac{1}{2} ) ( \text{pd} )</td>
</tr>
<tr>
<td>6. ( m_{\perp} = -2 ) ( \text{ss} )</td>
</tr>
<tr>
<td>7. ( y - 0 = -2(x - 1) ) ( \text{ic} )</td>
</tr>
<tr>
<td>8. ( (0,2) ) ( \text{pi} )</td>
</tr>
</tbody>
</table>

Notes:
1. For \( \text{ss} \), accept \( y - 2 = 0(x + 2) \) or \( y - 2 = (\text{value of } m, \text{ simplified or not})(x + 2) \)
2. \( \text{ic} \) is only available as a consequence of finding a perpendicular gradient
3. The diagrams below illustrate some of the 'lines' which can be accorded any marks. For example, in (b) a line perp. to BC passing through C earns marks \( \text{ss} \) and \( \text{pd} \) only.
4. For introducing decimals, work to 2 d.p.

For (a) Perp. b.s of AB

\[
\begin{align*}
\text{midpt } &= (-2,2) & \checkmark & \text{•1} \\
\frac{m_{AB}}{4} &= 4 & \checkmark \\
\frac{m_{\perp}}{1} &= -\frac{1}{4} & \checkmark \\
y - 2 &= -\frac{1}{4}(x + 2) & \checkmark & \text{•3} \\
\end{align*}
\]

2 marks given

For (a) Altitude thr' C

\[
\begin{align*}
m_{AB} &= 4 & \checkmark & \text{•2} \\
m_{\perp} &= -\frac{1}{4} & \checkmark \\
y - 2 &= -\frac{1}{4}(x - 5) & \checkmark & \text{•3} \\
\end{align*}
\]

2 marks given

For (b) Median thr' A

\[
\begin{align*}
\text{midpt } &= (1,0) & \checkmark & \text{•4} \\
m_{\text{med}} &= -3 & \checkmark & \text{•5} \\
y - 0 &= -3(x - 1) & \checkmark \\
\end{align*}
\]

2 marks given

For (b) Altitude thr' A

\[
\begin{align*}
m_{BC} &= \frac{1}{2} & \checkmark & \text{•5} \\
m_{\text{perp}} &= -2 & \checkmark & \text{•6} \\
y - 6 &= -2(x + 1) & \checkmark \\
\end{align*}
\]

2 marks given
2 The diagram shows a square-based pyramid of height 8 units. Square OABC has a side length of 6 units. The coordinates of A and D are (6, 0, 0) and (3, 3, 8). C lies on the y-axis.

(a) Write down the coordinates of B.

(b) Determine the components of $\overrightarrow{DA}$ and $\overrightarrow{DB}$.

(c) Calculate the size of angle $ADB$.

2

<table>
<thead>
<tr>
<th>3.1.11</th>

<td>2 marks</td>
<td></td>
</tr>
<tr>
<td>c</td>
<td>ans: 38.7°</td>
<td>4 marks</td>
<td></td>
</tr>
</tbody>
</table>

1. ic: interpret diagram
2. ic: write down components of a vector
3. ic: write down components of a vector
4. ss: use e.g. scalar product formula
5. pd: process lengths
6. pd: process scalar product
7. pd: process angle

$\overrightarrow{DA} = (3, -3, -8)$ $\overrightarrow{DB} = (3, 3, -8)$

$\cos ADB = \frac{\overrightarrow{DA} \cdot \overrightarrow{DB}}{|\overrightarrow{DA}| |\overrightarrow{DB}|}$ stated/implied by 1

$|\overrightarrow{DA}| = \sqrt{82}$, $|\overrightarrow{DB}| = \sqrt{82}$

$\overrightarrow{DA} \cdot \overrightarrow{DB} = 64$

$ADB = 38.7°$

Alternative method 1 for 4 to 7.

$\cos ADB = \frac{a^2 + b^2 - d^2}{2ab}$ $ss$

$a = b = \sqrt{82}$ $pd$

$\overrightarrow{BA} = \begin{pmatrix} 6 \\ 0 \\ 0 \end{pmatrix} \Rightarrow d = 6$ $pd$

$ADB = 38.7°$ $pd$

Alternative method 2 for 4 to 7.

$\triangle ADB$ isosceles, half base = 3 $ss$

$a = b = \sqrt{82}$ $pd$

$\sin \frac{1}{2} ADB = \frac{3}{\sqrt{82}}$ $ss$

$ADB = 38.7°$ $pd$

Note

1. For 7 accept 38.6° or 0.67 radians or 0.68 radians and answers which round to these values.
2. Do not penalise premature rounding before 7. 7 is the only mark available for calculations.
3. Any formula quoted at 4 must relate to the data or labelling in this question.
4. Treat $DA = d - a$ and $DB = d - b$ as a repeated error (RE) (2 not available).
5. Treat $DA = a + d$ and $DB = b + d$ as a repeated error (RE) (2 not available).
6. Calculations of the angles AOB (45) or AOD (70.7) may earn 3 of the last 4 marks provided the correct use of the scalar product has been demonstrated.
### Question 3

The diagram shows part of the graph of the curve with equation \( y = 2x^3 - 7x^2 + 4x + 4 \).

(a) Find the \( x \)-coordinate of the maximum turning point.

(b) Factorise \( 2x^3 - 7x^2 + 4x + 4 \).

(c) State the coordinates of the point A and hence find the values of \( x \) for which \( 2x^3 - 7x^2 + 4x + 4 < 0 \).

---

<table>
<thead>
<tr>
<th></th>
<th>1.3.12, 2.1.3</th>
<th>NC. C 02/23</th>
</tr>
</thead>
<tbody>

<tr>
<td>c</td>
<td>ans : ( A(-\frac{1}{2},0), \ x &lt; -\frac{1}{2} )</td>
<td>2 marks</td>
</tr>
</tbody>
</table>

- \( 1 \): ss : know to differentiate
- \( 2 \): pd : differentiate
- \( 3 \): ss : know to set derivative to zero
- \( 4 \): pd : start solving process of equation
- \( 5 \): pd : complete solving process
- \( 6 \): ss : strategy for cubic eg synth division
- \( 7 \): ic : extract quadratic factor
- \( 8 \): pd : complete the cubic factorisation
- \( 9 \): ic : interpret the factors
- \( 10 \): ic : interpret the diagram

Notes:

1. *\( \ast \) may be awarded for repeated synthetic divisions to arrive at another two with zero remainders.
2. The "-0" shown at *3 must appear at least once somewhere in the working between *1 and *2 (but not necessarily at *3).
3. At *4, the common factor of 2 may be included at the front or inside one of the binomials.
4. In (b) if \((x-2)^2(x+\frac{1}{2})\) appears ex nihilo award 1 mark out of the 3 available.
5. Candidates who attempt to find a solution via a graphics calculator earn no marks. The only acceptable method is via calculus.
6. For *9 accept \( x = -\frac{1}{2} \)
7. For *10 accept \( x \leq -\frac{1}{2} \).
4 A man decides to plant a number of fast-growing trees as a boundary between his property and the property of his next door neighbour. He has been warned, however, by the local garden centre that, during any year, the trees are expected to increase in height by 0.5 metres. In response to this warning he decides to trim 20% off the height of the trees at the start of any year.

(a) If he adopts the "20% pruning policy", to what height will he expect the trees to grow in the long run?

(b) His neighbour is concerned that the trees are growing at an alarming rate and wants assurances that the trees will grow no taller than 2 metres. What is the minimum percentage that the trees will need to be trimmed each year so as to meet this condition?

4 1.4.3 ++  CN C 02/21
a ans : 2.5 metres 3 marks
b ans : trim 25% 3 marks

†1 ic : interpret the decay factor
†2 ss : strategy for limit
†3 pd : process limit
†4 ss : reverse strategy for limit
†5 pd : process
†6 ic : interpret scale factor

†1 0.8 stated or implied  ic
†2 eg \( l = 0.8l + 0.5 \) or \( l = \frac{\text{L}}{1-0.8} \)  ss
†3 \(-1 < 0.8 < 1\) so \( l = 2.5 \) metres  pd
†4 \( 2 = 2m + 0.5 \)  ss
†5 \( m = 0.75 \)  pd
†6 trim 25%  ic

marked example

\[
\begin{array}{c|c|c|c}
0.2 & \times & \ 1 \\
l = 0.2l + 0.5 & \times & \bullet 2 \\
l = 0.625 \text{ metres} & \times & \ 1 \\
2 = 2m + 0.5 & \times & \bullet 4 \\
m = 0.75 & \times & \bullet 5 \\
\text{trim 75%} & \times & \ 2 \\
\end{array}
\]

in (a)
1 For †2 accept \( 0 < 0.8 < 1 \) so \( l = 2.5 \) metres
2 For \( a = 1.2 \)
   \[ L = 1.2L - 0.5 \]
   \[ L = 2.5 \] award NO marks.

in (b)
3 Trial & improvement is barely acceptable but the three marks are available as follows
   for 1st trial with a guess > 20% give †1
   for 2nd trial + improvement give †2
   for more trial(s) leading to 25% give †3

Candidates may strike lucky by:
Try pruning at 25%
Then \( L = 0.75L + 0.5 = 2 \) giving \( L = 2 \) (metres)
This needs to be accorded 3 marks.
5  Calculate the shaded area enclosed between the parabolas
with equations \( y = 1 + 10x - 2x^2 \) and \( y = 1 + 5x - x^2 \).

\[
\begin{align*}
\text{ans:} & \quad 20 \frac{5}{6} \\
\end{align*}
\]

6 marks

-1 ss: find intersections
-2 ss: know to find limits
-3 ss: know to integrate (upper – lower)
-4 pd: simplify
-5 pd: integrate
-6 pd: process limits

\begin{align*}
\text{\( \int_0^\infty \left((1 + 10x - 2x^2) - (1 + 5x - x^2)\right)dx \quad \text{ss} \)} \\
\text{\( x = 0,5 \) and} \\
\text{\( \int_0^5 (5x - x^2) \) \( \text{pd} \)} \\
\text{\( \frac{4}{7}x^2 - \frac{5}{3}x^3 \) \( \text{pd} \)} \\
\text{\( 20 \frac{5}{6} \) \( \text{pd} \)}
\end{align*}

Notes
1 Candidates who do not simplify (*) before integrating may be awarded • for integrating the upper function correctly and may be awarded • for integrating the lower function. The last mark is for evaluating and stating the area.
2 For candidates who find two separate areas and subtract – use the illustration below as a guide.
3 Candidates who attempt to find a solution via a graphics calculator earn no marks. The only acceptable method is via calculus.

**illustration for Note 2**

\[
\begin{align*}
1 + 10x - 2x^2 &= 1 + 5x - x^2 & \checkmark & 1 \\
x^2 - 5x &= 0 \\
x(x - 5) &= 0 \\
x &= 0,5 & \checkmark \\
\int_0^\infty \text{ or } \int_0^\infty \text{ (somewhere below)} & \checkmark & 2 \\
\int (1 + 10x - 2x^2)dx & \checkmark & 3 \\
x + 5x^2 - \frac{5}{2}x^3 & \checkmark & 4 \\
\int (1 + 5x - x^2)dx & \checkmark & 5 \\
x + \frac{1}{2}x^2 - \frac{5}{3}x^3 & \checkmark & 6 \\
46\frac{5}{6}, \quad 25\frac{5}{6}, \quad \text{and area } 20\frac{5}{6} & \checkmark & 6 \\
\end{align*}
\]

6 marks

**variation on a theme**

\[
\begin{align*}
1 + 5x - x^2 &= 1 + 10x - 2x^2 & \checkmark & 1 \\
\text{leading to } x &= 0,5 \\
\int_0^5 \text{ of } (1 + 5x - x^2) - (1 + 10x - 2x^2)dx & \checkmark & 2 \\
\int_0^5 \text{ of } 5x - x^2 \quad dx & \checkmark & 3 \\
\left[-\frac{5}{2}x^2 + \frac{5}{3}x^3\right]_0 & \checkmark & 4 \\
-20\frac{5}{6} \quad \text{so area } = 20\frac{5}{6} & \checkmark & 6 \\
& \checkmark & 5 \text{ marks}
\end{align*}
\]
Find the equation of the tangent to the curve \( y = 2 \sin \left( x - \frac{\pi}{6} \right) \) at the point where \( x = \frac{\pi}{3} \).

**Illustrations of evidence for awarding each mark:**

1. **pd**: find derivative
2. **ss**: know derivative at \( x = \ldots \) represents grad.
3. **pd**: find corresponding \( y \)-coordinate
4. **ic**: state equation of tangent

**Answer:**

\[
y = \sqrt{3}x + 1 - \frac{\pi}{3}
\]

4 marks

- **pd**: \( \frac{dy}{dx} = 2 \cos \left( x - \frac{\pi}{6} \right) \)
- **ss**: \( m = \sqrt{3} \)
- **pd**: \( y_{1,\frac{\pi}{3}} = 1 \)
- **ic**: \( y - 1 = \sqrt{3} \left( x - \frac{\pi}{3} \right) \)

**Notes:**

1. Accept decimal equivalent for \( \sqrt{3} \)
2. **\( \star^4 \)** is only available if an attempt to find \( m \) is based on calculus.
7 Find the x-coordinate of the point where the graph of the curve with equation \( y = \log_3(x-2) + 1 \) intersects the x-axis.

\[
\begin{align*}
\log_3(x-2) &= 1 \\
(x-2) &= 3 \\
x &= 5
\end{align*}
\]

1 mark awarded

\[
\begin{align*}
\log_3(x-2) + 1 &= 0 \\
(x-2) + 1 &= ... \\
... &= 3^0 \\
x &= 2
\end{align*}
\]

1 mark awarded

Notes:
1. Candidates who sketch the (related) function and conclude that the root is \( 2 < x < 3 \) may be awarded 1 mark. (Do not accept "the root = 2").
A point moves in a straight line such that its acceleration $a$ is given by $a = 2(4 - t)^{\frac{3}{2}}$, $0 \leq t \leq 4$.

If it starts at rest, find an expression for the velocity $v$ where $a = \frac{dv}{dt}$.

<table>
<thead>
<tr>
<th>Illustrations of evidence for awarding each •</th>
<th>Give 1 mark for each •</th>
</tr>
</thead>
<tbody>
<tr>
<td>• $1$ $V = \int \left(2(4 - t)^{\frac{3}{2}}\right) dt$</td>
<td>• 2 $\frac{1}{2}^2 (4 - 0)^{\frac{3}{2}}$</td>
</tr>
<tr>
<td>stated or implied by • $2$</td>
<td>pd</td>
</tr>
<tr>
<td>• $3$ $0 = 2 \times \frac{1}{2}^2 (4 - 0)^{\frac{3}{2}} + c$</td>
<td>ic</td>
</tr>
<tr>
<td>• $4$ $c = 10^\frac{3}{2}$</td>
<td>pd</td>
</tr>
</tbody>
</table>

Notes
1. • $3$ and • $4$ are only available when a constant of integration is included.
2. Differentiation earns no marks.
3. Note that

$$\int_0^4 \left(2(4 - t)^{\frac{3}{2}}\right) dt$$

only earns the first two marks.

$$= \left[2 \times \frac{1}{2}^2 (4 - t)^{\frac{3}{2}}\right]_0$$

$$= 10^\frac{3}{2}$$
Show that the equation \((1 - 2k)x^2 - 5kx - 2k = 0\) has real roots for all integer values of \(k\).

**2.1.5, 7, 9**

**ans:** proof 5 marks

1. **ss:** know to use discriminant
2. **ic:** pick out discriminant
3. **pd:** simplify to quadratic
4. **ss:** choose to draw table or graph
5. **pd:** complete proof using \(\text{disc} \geq 0\)

\[\text{discriminant } = \ldots \]
\[\text{disc } = (-5k)^2 - 4(1 - 2k)(-2k) \]
\[9k^2 + 8k \]
\[\text{e.g., draw a table, graph complete the square} \]
\[\text{choose to draw table or graph complete proof and conclusion relating to } \text{disc} \geq 0\]

**Notes**

1. The evidence for 4 will be
   - 0, \(-\frac{5}{8}\) and a graph
   - 0, \(-\frac{5}{8}\) and a table
   - 0, \(-\frac{5}{8}\) and a completing the square

2. Treat \((5k)^2 - 4(1 - 2k)(-2k)\) as bad form.

3. Treat \(-5k^2 - 4(1 - 2k)(-2k)\) as bad form.

\[25k^2 + 8k(1 - 2k)\]
\[9k^2 + 8k\]

\[\begin{array}{c|cccc}
  k & -2 & -1 & 0 & 1 \\
  \hline
  \frac{9k^2 + 8k}{4} & 1 & 0 & 17
\end{array}\]

\[9k^2 + 8k \geq 0\]
\[k(9k + 8) \geq 0\]
\[k \geq 0 \text{ or } k \leq -\frac{8}{9}\]

There are no integers between 0 and \(-\frac{8}{9}\)
Hence all roots are real for integer \(k\)

\[\text{5 marks}\]

\[\frac{(-5k)^2 - 4(-2k)(-2k)}{25k^2 - 16k^2}\]
\[= 9k^2\]

which is not negative anywhere since \(k^2\) is +ve and multiplied by a +ve number.
So all the roots are real whatever the value of \(k\).

\[\text{3 marks}\]
10 The shaded rectangle on this map represents the planned extension to the village hall. It is hoped to provide the largest possible area for the extension.

The coordinate diagram represents the right angled triangle of ground behind the hall. The extension has length $l$ metres and breadth $b$ metres, as shown. One corner of the extension is at the point $(a, 0)$.

(a) (i) Show that $l = \frac{3}{4} a$.

(ii) Express $b$ in terms of $a$ and hence deduce that the area, $A$ m$^2$, of the extension is given by $A = \frac{3}{4} a(8 - a)$.

(b) Find the value of $a$ which produces the largest area of the extension.

---

10 1.3.15

(a) ans : proof 3 marks

(b) ans : $a = 4$ 4 marks

- $1^1$ ss : select strategy and carry through
- $2^2$ ss : select strategy and carry through
- $3^3$ ic : complete proof
- $4^4$ ss : know to set derivative to zero
- $5^5$ pd : differentiate
- $6^6$ pd : solve equation
- $7^7$ ic : justify maximum eg nature table

---

Notes

1 For $7^7$ the minimum which is acceptable:

<table>
<thead>
<tr>
<th>$a$ or $x$</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>gradient or $m$</td>
<td>+ve</td>
<td>0</td>
<td>-ve</td>
</tr>
</tbody>
</table>

Clearly something like is preferable:

<table>
<thead>
<tr>
<th>$a$</th>
<th>4$^-$</th>
<th>4$^+$</th>
<th>4$^*$</th>
</tr>
</thead>
<tbody>
<tr>
<td>$\frac{dA}{da}$</td>
<td>+ve</td>
<td>0</td>
<td>-ve</td>
</tr>
<tr>
<td>maximum</td>
<td>...</td>
<td>...</td>
<td>...</td>
</tr>
</tbody>
</table>

---

Minimum requirements

(i) from diagram with hyp.=10

$L = \frac{10}{6} a \implies L = \frac{5}{3} a$

(ii) accept working back from $A$ for $2^2$

but do not accept going forward again for $1^1$.

---

Completing the sq ’ending’

$$A = \frac{3}{4} (a^2 - 8a)$$

$$= -\frac{3}{4} (a - 4)^2 - 16$$

$$= -\frac{3}{4} (a - 4)^2 + 12$$

max of 12

when $a = 4$
2 A TV football commentator claims that "you can't gain points without scoring goals". A football coach disagrees with this statement as he believes in solid defensive play. He is convinced there is no relationship between the number of goals scored by a team and the number of points they gain.

To test the football coach's claim, a random sample of 8 teams was selected from a football league. The number of points gained ($y$) was plotted against the number of goals scored ($x$) and the result is shown on the scattergraph.

Given that $\Sigma x = 343$, $\Sigma y = 260$, $\Sigma x^2 = 17863$, $\Sigma y^2 = 10686$ and $\Sigma xy = 13736$, calculate the product moment correlation coefficient and comment on the football coach's claim that there is no relationship between the number of goals scored and the number of points gained.

7 A restaurant caters for both vegetarian and non-vegetarian customers. It is found that the probability of a customer ordering a vegetarian meal is $\frac{2}{5}$.

All meals are classified only as vegetarian or non-vegetarian. Assuming that orders for meals are independent, calculate the probability that, on a particular day,

(a) the first three meals ordered are vegetarian.

(b) that at least one vegetarian meal is ordered in the first five orders.

8 (a) Show that the expected value of the score when a fair die is rolled is 3.5.

(b) A computer is programmed to simulate the scores when a six-sided die is rolled. It produces results such that one of the scores occurs 25% more often than any other score.

(i) Find the probability that the computer selects this score.

(ii) The expected value of the score on the simulated die is 3.44. Find which score occurs 25% more often than any other.
