ALL questions should be attempted.

1. (a) A line, \( l_1 \), passes through the points \( A(-3, 0) \) and \( B(5, 4) \).

The line makes an angle of \( a^\circ \) with the positive direction on the \( x \)-axis.

Find the value of \( a \).  

(b) A second line, \( l_2 \), with equation \( 4x + 3y = 12 \), crosses the line in (a).

The angle between the two lines is \( b^\circ \), as shown.

Find the value of \( b \).  

2. The rectangular based pyramid \( D,OABC \) has vertices \( A(6, 0, 0) \), \( B(6, 8, 0) \) and \( D(3, 4, 7) \).

   On the first day of the trial, an initial 250 mg dose is given to a patient at 7 a.m.

   (a) After 24 hours and just prior to the second dose being given, how much anti-biotic remains in the patient’s bloodstream?  

   The patient is then given a further 250 mg dose at 7 a.m. and at this time each subsequent morning thereafter.
